

YOUR BRAND ON YOUR G2 UNIT

If you'd rather your units carried your own name than G2's, we produce a custom sticker in place of our standard rating label. It carries your logo, your company name and address, your own product and model naming, and a QR code, alongside the compliance marks. You don't need to replace every field.

Sticker field	Changeable	What we need from you
Logo	Yes	Your logo artwork: PNG, sized to 155 x 26pt, black text/logo on a transparent background (not white). Logos supplied in white or in other formats will need to be converted first.
Company name and address	Yes	Your registered company name, full address and postcode. <i>*See note below</i>
URL / QR code	Yes	Nothing, by default the QR looks up the serial number on G2's support portal. If you'd rather it pointed at your own support page, give us the URL.
Product and model	Yes	Your own product/model naming, if you'd like it shown instead of G2's.
Power and input voltage	No	Nothing, set by the fitted power supply.
UKCA / CE / WEEE marks	Fixed marks	Nothing, these appear on every sticker as standard. <i>Speak to us if you would like support in achieving alternative certifications.</i>

*Note: changing the manufacturer details under the logo (company name and address) makes you the legal manufacturer of record for that unit under UK and EU product law, rather than G2. That carries obligations such as issuing your own Declaration of Conformity and WEEE producer registration. Talk to us and we'll walk through what this means for your order.
